

CASE STUDY

Griffith University Mt Nathan Campus

Zero Flush Urinals

Operational
2006

THE PROBLEMS:

The University had a number of water free urinals installed throughout their library, but soon found maintenance costs were skyrocketing. The other urinals were lasting less than four weeks between services and being that they were located in the main library building, something needed to be changed.

Griffith University Mt Nathan Campus

University Drive
Mt Nathan, QLD

THE SOLUTION:

The *ZeroFlush Waterless Urinals* were installed at the university and the difference was noticed immediately. People were commenting that they not only looked better than the previous fiberglass models, but were lasting over three months between services. Gary Mays, the plumber charged with servicing all of the urinals at the university said, *"Servicing urinals is a very predictable task. After a few months we can generally say when urinals are going to block and plan for it, but now, we only have to worry about that three or four times per year as opposed to the previous twelve or thirteen. It really is an amazing difference."* The University is now saving money on water and sewer costs and is reducing its environmental impact with the ZeroFlush Urinals.

THE RESULTS

1. Eliminated Flush Valves that leak and waste water
2. Reduced Annual Water Usage
3. Reduced Maintenance Costs
4. Fewer interruptions to library patrons and cleaning staff
5. Improved Environment
6. Improved "Green" image of Griffith University
