

# CASE STUDY

## McDonald's Restaurant Nerang

ZeroFlush Waterless  
Urinals

Operational  
2006

### THE PROBLEMS:

The McDonald's store at Nerang on the Gold Coast was tired of receiving huge bills for maintenance and water costs on their water flushing urinals. In 2005 they changed to an alternate waterless urinal brand. Instead of saving money, maintenance costs skyrocketed and were consequently more obtrusive and expensive than the water flushing urinals. Something needed to be done...

McDonalds Restaurant Nerang

1-9 Hinkler Drive  
Nerang, QLD

### THE SOLUTION:

The *ZeroFlush Waterless Urinals* were installed at the restaurant and instead of having maintenance performed every two weeks, they now enjoy months of waterless urinal usage before maintenance is required. When asked about the change, restaurant owner Joe Condon said *"I can't believe the difference that the new urinals have made. Our maintenance costs were through the roof with the other brand and we were having to close the toilets down every two weeks until someone could come and sort it out. Now we don't have to worry about them for months at a time"*. The restaurant is now saving money on water and sewer costs and are reducing their environmental footprint with the ZeroFlush Urinals.

### THE RESULTS

1. Eliminated Flush Valves that leak and waste water
2. Reduced Annual Water Usage
3. Reduced Maintenance Costs
4. Fewer interruptions to patrons and restaurant managers
5. Improved Environment
6. Improved "Green" image of McDonalds
